This sequence represents a truncated procollagen pro-alphal(III) chain that can be used in the procollagen molecules of the invention. The C-
trimerised pro-alpha chains prior to cleavage of the monomer chains into trimerised pro-alpha chains prior to cleavage of the N- and C-propeptides and formation of collagen in fibril-forming pro-alpha chains. The C-
propeptides determine the type-specific assembly of the moieties to which they are attached. The molecule of the invention comprises a first moiety having procollagen C-propeptide activity attached to a second moiety, which is an alien collagen alpha-chain or a non-collagen material. The movel collagen molecule can be used for treatment or diagnosis in humans or animals, especially for the treatment of procollagen suicide, as an adhesive or implant, to promote (chronic) wound healing or fibrotic diseases with reduced scarring or for use in photography, brewing, foodstuffs or textiles. The novel collagen molecules, especially when containing substitutions in the recognition site, may have significantly altered properties and characteristics, such as different binding
C-propeptide; recognition sequence; procollagen; monomer chain; therapy; trimerised pro-alpha chain; fibril; procollagen suicide; wound healing; fibrotic disease; human.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 28074, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPEREBNE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
APPLICANT: Qvist, Per
APPLICANT: Bonde, Martin
TITLE OF INVENTION: A Method for Assaying Collagen Fragments
TITLE OF INVENTION: A Method and Use of the Method to Diagnose the Presence of
TITLE OF INVENTION: Method and Use of the Method to Diagnose the Presence of
TITLE OF INVENTION: Disorders Associated with the Metabolism of
NUMBER OF SEQUENCES: 21

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 40,

-!- SUBUNT: Trimers of identical alpha 1(III) chains. The chains are linked to each other by interchain disulfide bonds. Trimers are also cross-linked via hydroxylysines.
-!- PTM: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains.
                                                                                                                                                                                                                                                                                                                                                        Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PATHWAY: DNA replication pathway; first step.
SUBUNIT: Heterodimer of a large and a small chain.
SIMILARITY: Belongs to the ribonucleoside diphosphate reductase large chain family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .

Caballero-Franco C., Petrosyan P., Carrero-Sanchez J.C.,
De la Torre P., Laclette J.P., Ostoa-Saloma P.,
"Entamoeba histolyrica nucleotide sequence containing the gene for a
small heat shock protein, the CYP1 cyclophilin gene and a truncated
ORF for a putative serine/threonine protein kinase.";
Submitted (APR-2002) to the EMBL/GenBank/DDBJ databases.

Assay for detecting cross-linked telopeptide analytes indicative of type II collagen resorption in vivo in a body fluid sample, comprises contacting the sample with an antibody which binds to the analyte.

Disclosure; Page 15; 34pp; English.

The invention relates to immunoassays for measuring type II collagen (cartilage) resorption in vivo. The method of analysing a body fluid sample for the presence of an analyte indicative of a physiclogical condition, involves contacting the body fluid sample with an antibody (Ab) which binds to the analyte, detecting binding of Ab in the body fluid sample, and correlating any detected binding to the physiclogical condition. The analysis is useful for measuring type II collagen (cartilage) resorption in vivo, for distinguishing between resorption of

The invention relates to a method of determining the rate of biosynthesis or breakdown of at least one inaccessible biological molecule in a subject. The method is useful for diagnosis or monitoring and treatment of diseases associated with an altered rate of biosynthesis/breakdown of an isotopically labelled precursor molecule, specifically osteoporosis; left-ventricular hypertrophy; liver cirrhosis or fibrosis; congestive heart failure; scleroderma; coal-miner's pneumoconiosis; cardiac or lung fibrosis; Alzheimer's disease; multiple sclerosis; rheumatoid arthritis; diabetes mellitus; muscle-wasting syndromes; muscular dystrophy; athletic training and cancer. The method is also useful for screening candidate gene or protein targets, phenotypic/human validation studies on potential drugs, drug mechanism studies and determining the risk of developing the disease. The present sequence is human C-terminal telopeptide alpha 1. This sequence is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Determining rate of biosynthesis or breakdown of inaccessible biological molecules, useful e.g. for diagnosis or monitoring treatment, by administering labeled precursor.

Recombinant production of collagen - by expressing a pro-peptide-collagen sequence and cleaving at an intermediate proteolytic recognition site. recombinant human collagen polypeptides of the invention. This sequence represents the C-terminal peptide of a recombinant human alphal(III) collagen of the invention. The recombinant pro-collagen of the invention comprises a natural collagen polypeptide chain, a pro-peptide, and a non-natural site-specific proteolypic agent recognition site between the collagen and pro-peptide. The recombinant pro-collagens are used to produce collagens which can be used in tissue and cell cultures. AAR92061-R92069 represent N-terminal and C-terminal peptides of the Recombinant production of collagen

```
ó
The collagens can also be used as biocompatible materials such as artificial skin, sutures, haemostatic sponges or tissue augmentation compositions for use in humans. The pro-peptide increases the yield of secreted pro-collagen from cells expressing the recombinant pro-collagen. The increase in yield of the pro-collagen, as compared to cells expressing the collagen chains alone, is at least 1000%
                                                                                                                                                                                                                           Human collagen type I cross-linked C-terminal peptide, PIIICP(alphal).

Determining rate of biosynthesis or breakdown of inaccessible biological molecules, useful e.g. for diagnosis or monitoring treatment, by administering labeled precursor.

Claim 24; Page 102-103; 105pp; English.

The invention relates to a method of determining the rate of biosynthesis or breakdown of at least one inaccessible biological molecule in a subject. The method is useful for diagnosis or monitoring and treatment of diascases associated with an altered rate, of biosynthesis/breakdown of an isotopically labelled precursor molecule, specifically osteoporosis; left-ventricular hypertrophy; liver cirrhosis or fibrosis; congestive heart failure; scleroderma; coal-miner's pneumoconiosis; congestive heart failure; scleroderma; coal-miner's pneumoconiosis; congestive tibrosis; Alzheimer's disease; multiple sclerosis; rheumatoid arthritis; diabetes mellitus; muscle-wasting syndromes; muscular dystrophy; athletic training and cancer. The method is also useful for screening candidate gene or protein targets, phenotypic/human validation studies on potential drugs, drug mechanism studies and determining the risk of developing the disease. The present sequence is human collagen type I cross-linked carboxy terminal peptide (ICTP). This sequence is used to illustrate the of the invention

colleges such as alcoholic cirrhosis, biliary cirrhosis, hepatitis, schistosomiasis, cardiac fibrosis, Crohn's disease, diabetic nephropathy and fibroses caused by surgery result from an inappropriate nephropathy collagen fibrils. Collagen III is synthesised as a preproprotein which is modified by post-translation modification. The mature collagen III fibrils are generated by cleavage of a propeptide from the C-terminus followed by cleavage of a propeptide from the C-terminus followed by cleavage of a propeptide from the C-terminus followed by cleavage of a propeptide from the C-terminus followed by cleavage of a propeptide from the C-terminus followed by cleavage of a fragment from the N-terminus propeptide [PIIICP]. As the corresponds to the procollagen III C-terminal propeptide [PIIICP]. As the surrounding tissue fluids. The invention relates to an immunoassay to determine PIIICP concentrations and thus diagnose the above diseases and others which result from inappropriate collagen deposition. Different immunoassay may also be used to determine which disease a particular measure the rate of collagen synthesis in patients being treated with glucocorticosteroids in addition the new antibodies may be used in
                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New immunoassay for procollagen-III-C-terminal propeptide (PIIICP) useful for diagnosing diseases such as alcoholic cirrhosis, hepatitis and

The invention relates to a complex between two interacting proteins in adipocyte cells, given in the specification. The proteins are identified by selecting a bair protein from a known adipocyte marker and then performing a yeast 2-hybrid selection to isolate prey proteins encoded by complex of an adipocyte coNA library. The proteins are designated SID (RTM) (selected interacting domains) proteins. Also included are a polymenteotide encoding a polypeptide in the adipocyte cells, a crocombinant host cell expressing at least one of the interacting copyment to sequences given in the specification (including its fragment or variant), comprising the vector a SID (RTM) polymucleotide comprising any of the 738 mucleotide sequences given in the specification (including its fragment or variant), a SID (RTM) polymucleotide comprising the polympeptides and a comprising the vector, a protein chip comprising the polympeptides and compounds are useful for preventing or treating metabolic disorders such as obesity or diabetes. The polymucleotides are useful as probes or primers. The complex is preventing or treating metabolic disorders such as obesity or diabetes. The polymucleotides are useful as probes or primers. The complex is complex preventing drugs that modulate the protein interacting domains sld control of particularly useful for identifying selected interacting domains (STM) (RTM)) for screening drugs that modulate the protein interaction, thus exhibiting the therapeutic effect. The present sequence represents a SID (CTM) protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              wew complex between two interacting proteins in adipocyte cells, useful for identifying selected interacting domains that modulate protein interactions, or for preventing or treating metabolic disorders such as obesity or diabetes.
                                                                                                                                                                                                                                                                                        Human; prey; adipocyte; SID; selected interacting domain; anorectic; antidiabetic; protein-protein interaction; diabetes; yeast 2-hybrid assay; metabolic disorder; obesity.

Human ovarian antigen #10.

```
The present invention relates to the isolation of novel human enzyme polypeptides, and the cDNA (AAS40785-AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of diagnosis, treatment, prevention and/or prognosis of a wide range of immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. AIDS) autoimmune disorders (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis), blood-related disorders (e.g. haemophilia), reproductive disorders (e.g. infertility) and infectious disorders (e.g. Influenza). The polymucleotides of the invention can also be used in gene therapy. AAU22915-AAU23814 represent the novel human enzyme polypeptides of the invention. Note: The sequence the novel human enzyme polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but were sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel polypeptides and polymucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 11; SEQ ID NO 1671; 1180pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Barash SC, Ruben SM;

Novel isolated human ovarian related polypeptide useful for diagnosis/treatment of disorders of ovary and breast such as neoplastic disorders, infectious diseases, inflammatory diseases, and reproductive disorders

Claim 11; SEQ ID NO 78; 524pp; English.

The invention relates to isolated ovarian related polypeptide (ovarian antigen) comprising a sequence at least 90% identical to a sequence selected from a polypeptide fragment, domain, epitope or full length protein of a sequence (S1) appearing as ABG6029-ABG60296 having protein of a sequence (S1) appearing as ABG60239-ABG60296 having conflored activity, or a variant, allelic variant or species homologue of S1. Also included are the CDNA clones encoding the proteins of S1. S1, an anti-S1 antibody and the CDNA clones encoding the proteins of S1. S1, conformed anti-S1 antibody and the CDNA are useful for diagnosing, preventing, treating or ameliorating a medical condition in mammalian subject complastic disorders (such as ovarian Krukenberg tumour and cancer). Infectious diseases (e.g., mastitis), inflammatory disorders (systemic lupus erythemberg tumour and cancer).

C1 (e.g., abscesses), reproductive system disorders (page of disease), autoimmune disorders (systemic lupus erythematosus, rheumatoid arthritis), blood-related disorders (sickle cell anaemia).

C2 autoimmune disorders (systemic lupus erythematosus, rheumatoid arthritis), blood-related disorders (sickle cell anaemia).

C3 arthritis), blood-related disorders (sickle cell anaemia), respiratory disorders (latenders, neural activity and disorders (latenders) disorders (latenders) (inflammatory disorders), liver disorders, disorders of the large intestine, cendocrine disorders (Asorders, disorders of the large intestine, developmental and inherited disorders, disorders of the large intestine, cendocrine disorders, disorders disorders of the large intestine, cendocrine disorders, disorders, disorders of the large intestine, cendocrine disorders (disorders, disorders of the large intestine, cendocrine disorders), liver disorders, disorders of the large intestine, cendocrine disorders (disorders, disorders of the large intestine, cendocrine disorders, disorders, disorders disorders, disorders disorders, disorders, disorders disorders disorders, disorders dis

This sequence represents a chimeric procollagen molecule of the invention. This sequence has the procollagen C-prepropeptide from the pro-alphal (III) chain sequence. The C-propeptide is implicated in the assembly of the monomer chains into trimerised pro-alpha chains prior to cleavage of the N- and C-propeptides and formation of Collagen in fibril-forming pro-alpha chains. The C-propeptides determine the type-specific assembly of the moieties to which they are attached. The molecule of the invention comprises a first moiety, which is an alien collagen alpha-chain or a non-collagen material. The convel collagen molecule can be used for treatment or diagnosis in humans or animals, especially for the treatment of procollagen material. The covalings with reduced scarring or for use in photography, brewing diseases with reduced scarring or for use in photography, brewing containing substitutions in the recognition site, may have significantly when the containing substitutions in the recognition site, may have significantly convent containing substitutions in the recognition site, may have significantly convents.

This sequence represents a truncated procollagen pro-alphal(III) chain that can be used in the procollagen molecules of the invention. The C-propeptide is implicated in the assembly of the monomer chains into trimerised pro-alpha chains prior to cleavage of the Monomer Chains into crimerised pro-alpha chains prior to cleavage of the N- and C-propeptides and formation of collagen in fibril-forming pro-alpha chains. The C-collagen cattached, The molecule of the invention comprises a first moiety having procallagen C-propeptide activity attached to a second moiety, which is an alien collagen alpha-chain or a non-collagen material. The novel collagen molecule can be used for treatment or diagnosis in humans or animals, especially for the treatment of procollagen suicide, as an adhesive or implant, to promote (chronic) wound healing or fibrotic diseases with reduced scarring or for use in photography, brewing, containing substitutions in the recognition site, may have significantly altered properties and characteristics, such as different binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ·.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel pro:collagen mol. - comprising pro:collagen C-pro:peptide attached to an alien collagen alpha-chain or non-collagen material, useful e.g.

Ното

11-OCT-2001.

Collagen type III alpha-1 ovarian tumour marker protein, SEQ ID NO:72.

(first entry)

08-FEB-2002

```
New polynucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence represents a protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Wang J;

```
The invention relates to methods for diagnosing and prognosing ovarian tumours in an individual via the detection and measurement of the tumours in an individual via the detection and measurement of the tumours in an individual via the detection and measurement of the expression of ovarian tumour in a patient, for identifying an individual at increased risk for developing ovarian cancer, in prognostic tests for assessing the relative seveloping ovarian cancer, in tests for assessing the relative seveloping ovarian cancer, in tests for monitoring a patient in remission from ovarian cancer. The methods can additionally be used to identify a particular tumour as monitoring disease status in a patient being treated for ovarian cancer. The methods can additionally be used to identify a particular tumour as being an ovarian tumour (i.e., an epithelial ovarian tumour selected from serous cystadenoma, borderline serous tumour, serous cystadenocarcinoma, contained and procarcinoma, endometricid carcinoma, undelferentiated carcinoma, clear cell adenocarcinoma, cystadenofibroma, adenofibroma and Brenner cumour. The ovarian tumour marker genes of the invention were found to be overexpressed in a broad variety of ovarian epithelial tumour cells crelative to normal ovarian pathways, in the regulation of cell confideration and in protein folding, and many of these are membrane confect and an expense for their each encoded confideration and may be overed for their use as diagnostic and encoded confideration and the ovarian tumour marker genes or their encoded confideration and the povarian epithelial relative to secreted. In addition to their use as diagnostic and confideration and the ovarian tumour marker genes or their encoded confideration and the povarian tumour marker genes or their encoded confideration and the provered for their expense.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
